

DS-C30S-04VI VGA Input Board

The video wall controller is mainly used for screen splicing control system, and is the core control device of the system. As a new-generation FPGA-based pure hardware image processing device, it adopts the dual data switching technology and the structure of main control board and service boards. It supports processing and transmitting large data, processing multiple high-definition and ultra-high-definition signals in real time, and managing multiple screens.

- Supports 4 channels of VGA video input and YUV 444 collection.
- Provides one mini-DP audio input port to allow 4 channels of 3.5 mm audio input via the audio adapter cable.
