VIP Port	Ports to : data on VIP ports is preferentially forwarded when bandwidth resources are insufficient.
Port Isolation	Ports 1 to 8: port isolation mode to improve network security Ports in an isolation group cannot communicate with each other, but they can communicate with ports outside the isolation group.
PoE Watchdog	Ports 1 to 8: auto detect and restart the cameras that do not respond.
Loop Prevention	Loop prevention is used to prevent the switching network from forming loops, which will seriously affect network communication. Disabled by default. Support 802.1D STP. Support 802.1w RSTP.

▪ Typical Application

▪ Physical Interface

No.	Indicator/Port	Description
①	PoE-MAX Indicator	Solid on: The output power of the switch is about to reach or has reached the upper limit. The power supply may be abnormal if more devices are connected. Unlit: The switch supplies power to a powered device (PD) normally and its output power does not reach the upper limit. Note The PoE-MAX indicator will be unlit in 5 seconds after the output power of the switch returns to normal.
②	LINK/ACT Indicator	Solid on: The port is connected. Flashing: The port is transmitting data. Unlit: The port is disconnected or connection is abnormal.
③	PoE Indicator	Solid on: The switch supplies power to a PD normally. Unlit: The switch is disconnected from a PD or power supply is abnormal.
④	PWR Indicator	Solid on: The switch is powered on normally. Unlit: No power supply is connected or power supply is

		abnormal.
⑤	10/100 Mbps PoE RJ45 Port	Used for connection to a PD via a network cable.
⑥	Gigabit RJ45 Port (Uplink)	Used for connection to another device via a network cable.
⑦	Reset Button	Press and hold the reset button for about 5 seconds to restore all the configurations of the switch to default settings.
⑧	Grounding Terminal	Used for connection to the grounding cable to protect the switch from lightning.
⑨	Power Supply	Use the attached power adapter and power cord to connect the switch to a socket.
